Ryan Neumann
Database Management
20 April 2016
Lab 9

1.  Identify and document all functional dependencies.
    A.  PID -> firstName, lastName, Address, PhoneNumber
    B.  CID, PID, ACID -> TeamName
    C.  CID -> firstName, lastName, Address, PhoneNumber, YearsCoaching
    D.  ACID -> firstName, lastName, Address, PhoneNumber, YearsCoaching

2.  Draw a fully annotated E/R diagram that illustrates the Platonic ideal of beautiful and correct relational database design!

                    (PNG file in Github lab 9 folder)

3.  Convince me your database is in 3NF (or even better in Boyce-Codd Normal Form)

        There is no shared data within this database besides the Primary key.  That is why I believe this database is in 3NF.
